

Chlamydia is a bacterial infection that can be easily cured with antibiotics.

You have been prescribed Azithromycin 1g

1. Take two 500mg tablets immediately as a one-off dose, with or without food.
2. No sexual contact for 7 days after treatment is commenced, or until the course is completed and symptoms resolved, whichever is later.
3. If you vomit within two hours of taking your dose, please phone us on 9227 6178 for further advice.

Other important information

- Chlamydia is a notifiable infection. This means we are required to complete a Department of Health notification form, which is used for statistical purposes. Results are not shared with anyone else.
- You need to let any person you have had sex with in the last 6 months know, so they can be treated & tested as well. If you need help with this, call us on 9227 6178. Alternatively, you can use this website to anonymously inform partners: letthemknow.org.au
- We recommend a follow up STI test in 3 months.
- If you have any questions about your management, please call the Sexual Health Helpline on 9227 6178.
